SCANNING NEWS

JULY 1986

VOLUME ONE > ISSUE 5 = Page 7

POSTAGE RATE CHART

Just about all of us in this hobby of radio monitoring find it necessary to mail lists of frequencies, photo-copies of articles, clippings, etc. to our pen pals and friends.

Since most of us do not own a postal scale, we felt the following chart may be of help:

USE \$.22 POSTAGE FOR:

#10 envelope & (6) 8½" X 11" sheets
6½" X 9½" mainila envelope & (4) sheets*
9" X 12" Manila envelope & (2) sheets*
10" X 13" Manila envelope & (1) sheet*

USE \$.39 (or .44) POSTAGE FOR:

#10 envelope and (11) 8½" X 11" sheets
6½" X 9½" Manila envelope & (10) sheets*
9" X 12" Manila envelope & (8) sheets*
10" X 13" Manila envelope & (7) sheets*

* 8½" X 11" sheets

MOVING??

Subscribers who plan on changing their address should remember to notify us so we can change our records for mailing NESN!!

Karl Schwartzman (NESN-NJCH-01) will be moving to Baldwin, N. Y. the end of August. Karl has already sent us his future address. We began corresponding with Karl earlier this year. We wish him well and will be sending him copies of NORTHEAST SCANNING NEWS®.

MARINE BAND REPEATER

The United States Coast Guard uses a repeater system to increase the range of their Marine channel 16 (Distress and Calling) on frequency 171.335 in the Delaware River between New Jersey and Pennsylvania. Located on top of bridges in the area, it repeats a very active frequency, especially on Summer weekends!! Give it a try!!

BOOK REVIEW

MIDWEST FEDERAL FREQUENCY DIRECTORY By Scan America, 430 Garner Drive, Suffield, Ohio 44260. Published 1986, 79 pages.

We were one of the first to obtain this book, and recommend it highly for those of you interested in monitoring the Federal frequencies.

Don't let the title fool you, there are many Nationwide Federal frequencies listed in this book of interest to us in the East and there are many Philadelphia frequencies shown.

Partial list of agencies include: FAA, FEMA, GSA, DEA, FBI, BATF, IRS, Customs, and the always interesting Secret Service.

The book is about the size of RCMA and costs \$ 8.00 post-paid.

RACE TRACK MONITORING

Shortly after we received our Regency HX-1000, several years ago, we took it with us to Dover Downs Race Track in Dover, Delaware.

We had pre-programmed the scanner with some "sports" frequencies and monitored them from our clubhouse seat.

In this way, we learned that they use 151.895 as communications between the pace car, judges and track announcer.

When a minor accident or event happened way away from the grandstand, we were alerted to it over the HX-1000!! Having the scanner along made for a much more interesting time.

CAUTION: Taking a scanner to a betting event may not be welcomed by the track security as they may think you are getting inside info or some other "hanky-panky!"

MONITORING THE MALLS

Popular shopping mall frequencies in most areas include:

151.625, 151.865, 151.895 & 151.775
